

## Gyproc Sound Bloc- Cut the noise by half

Noise in a modern day office or home has become more or less inevitable. As per a recent report published, noise at workplace can be one reason for affecting the health of your heart.

Noise has also been associated with other forms of health ailments like depression, fatigue and stress; all contributing to loss of productivity at work places.

Acoustics at work or at home has so far been a neglected part of the interior landscape. As a part of a recent survey, it was also found that 70% of Indian living in metros want quieter home & work spaces. Realizing this need for acoustic insulation, Saint Gobain Gyproc has come up with Sound Bloc; an innovative gypsum plasterboard designed for reducing noise levels within interior spaces

Gyproc Sound Bloc is a breakthrough gypsum plasterboard consisting of high density aerated gypsum core bonded to paper liners. This board has proven to improve sound insulation by 50% (+3 dB) as compared to plain gypsum plasterboards. This implies that Gyproc Sound Bloc can reduce the transmission of sound between walls by half and provide a much more noise free environment for the inhabitants. The Gyproc Sound Bloc boards also maintain the other physical performance factors of mechanical strength, fire resistance and being light in weight.

Gyproc Sound Bloc is ideal for partitions between office cabins, conference and meeting rooms, multiplexes, classrooms, banquet rooms etc. where sound level not exceeding 20 dB is appreciated.

**Availability:** Get it from the Saint-Gobain Gyproc distribution network across the country
